

제13강 Messaging (2)

텍스트 메시지 송신

```
def send_message(chat_id, text):  
    r = requests.get(f'{telegram_url}/sendMessage', params={'chat_id' : chat_id, 'text': text})  
    if r.ok:  
        print(json.dumps(r.json()['result'], indent=4, ensure_ascii=False))  
    else:  
        print(f'FAIL : {r.json()}')  
  
# send message to master  
send_message(6964349173, '안녕하세요. 봇입니다.')
```

기존 봇 삭제(deletebot) 및 신규 봇 추가(newbot)

/newbot 04:31 PM✓✓

Alright, a new bot. How are we going to call it? Please choose a name for your bot.

04:31 PM

홍길동_봇 04:31 PM✓✓

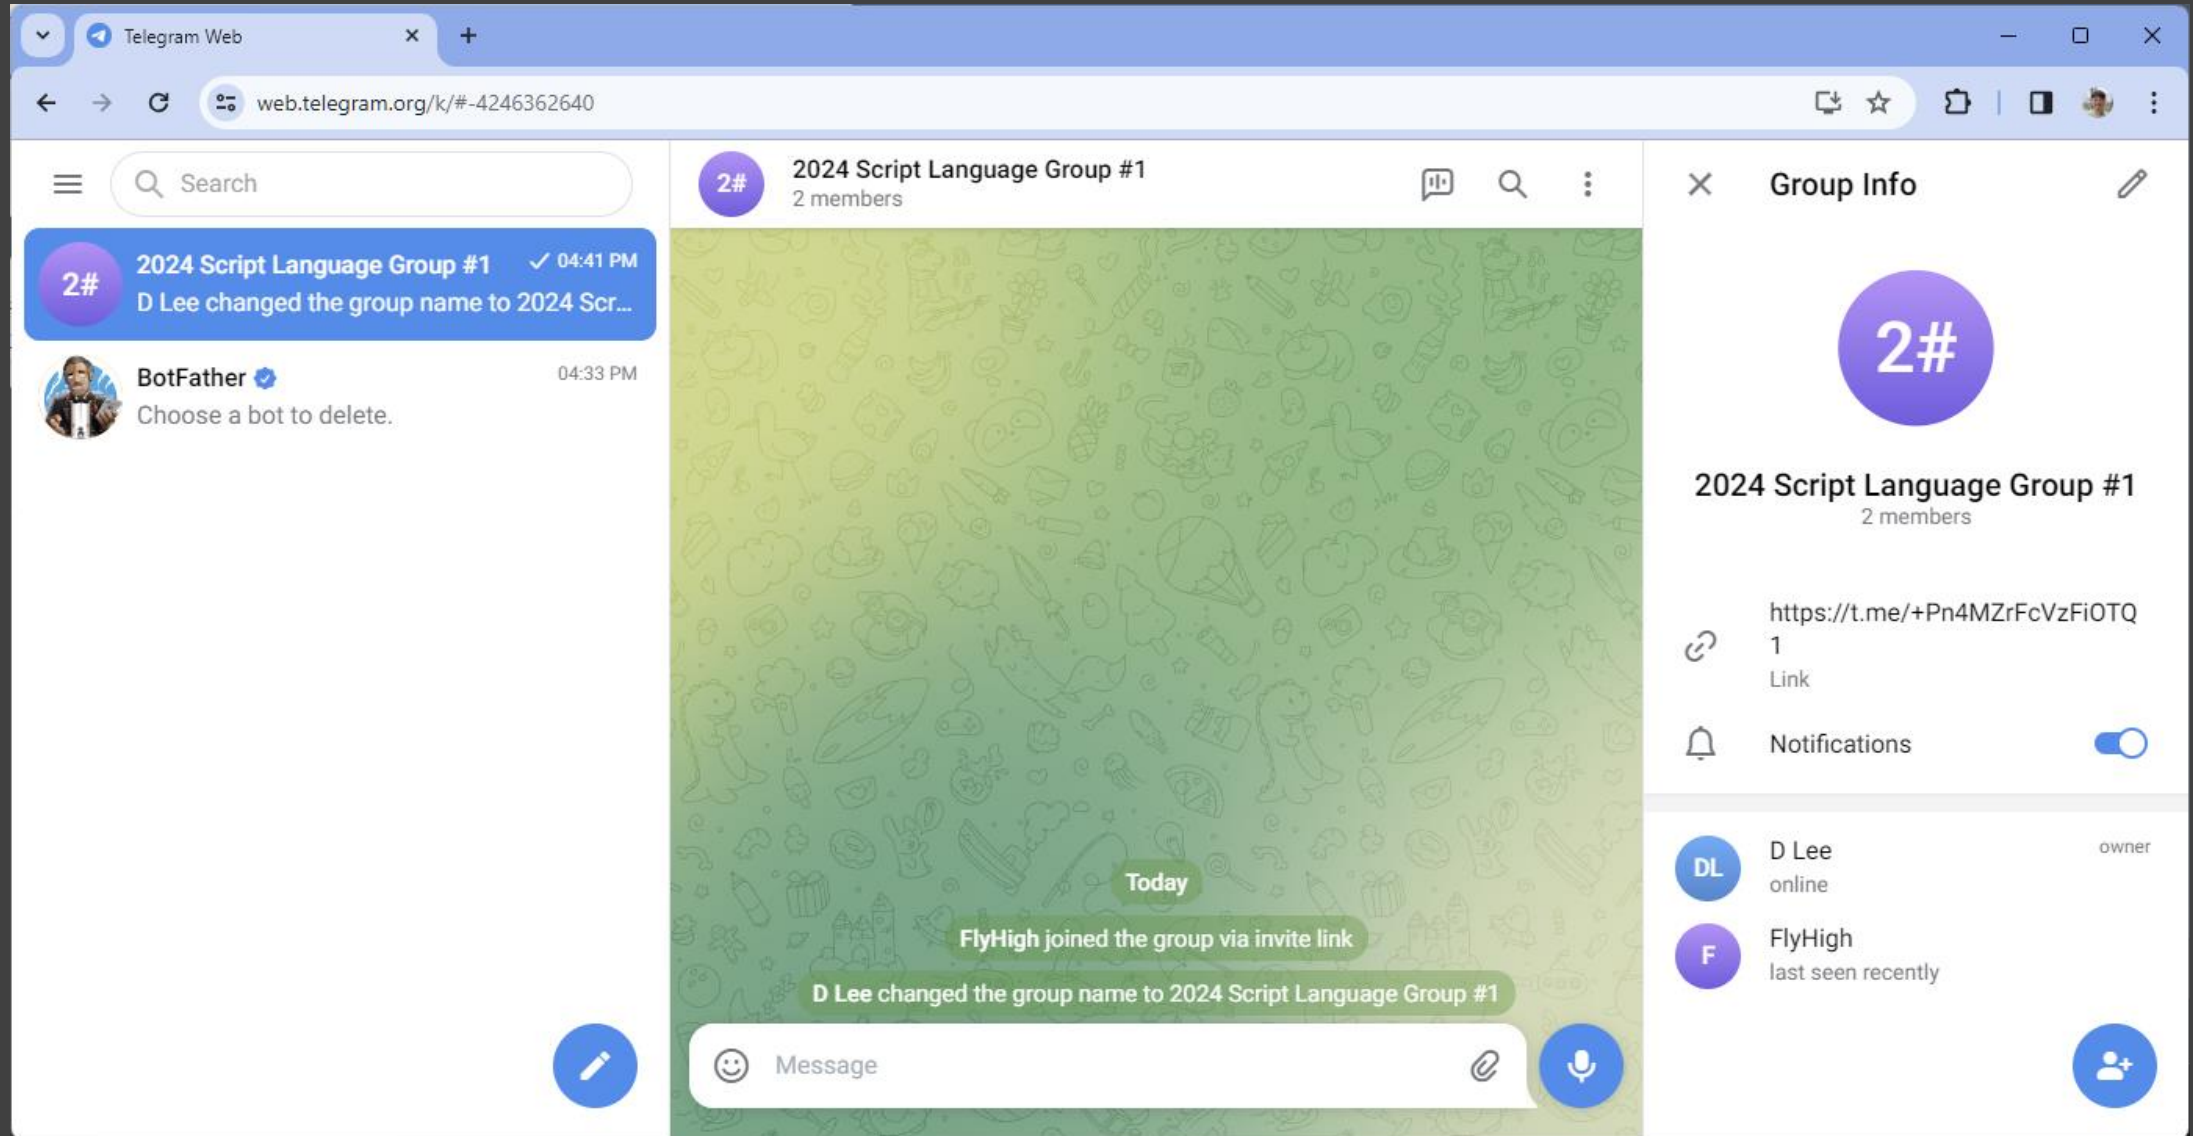

Good. Now let's choose a username for your bot. It must end in `bot`. Like this, for example: TetrisBot or tetris_bot.

04:31 PM

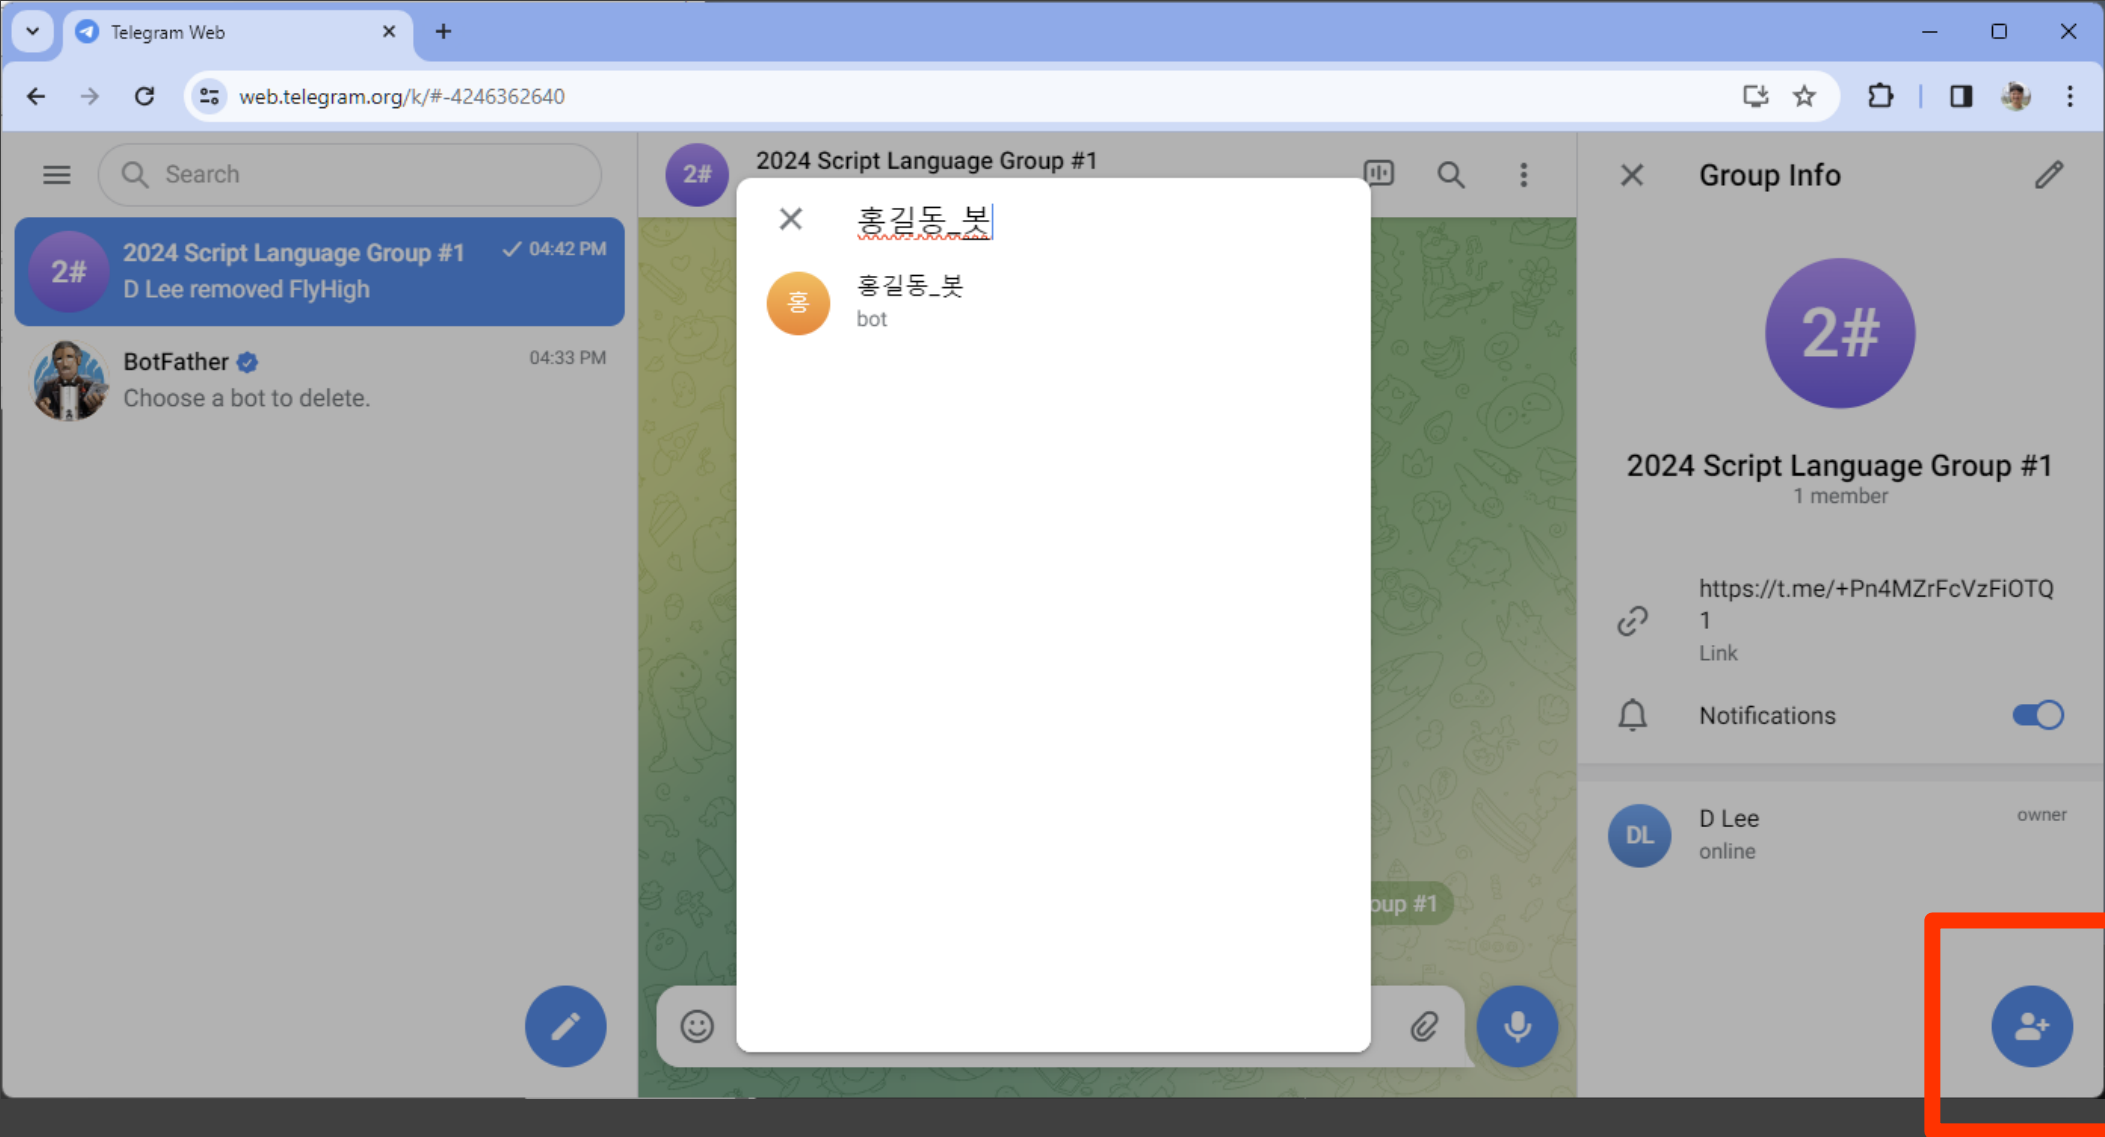

Honggildong_bot 04:31 PM✓✓

Done! Congratulations on your new bot. You will find it at t.me/Honggildong_bot. You can now add a description, about section and profile picture for your bot, see [/help](#) for a list of commands. By the way, when you've finished creating your cool bot, ping our Bot Support if you want a better username for it. Just make sure the bot is fully operational before you do this.
